

End Spreadsheet Chaos

Your teams rely on static reports and spreadsheets that are outdated the moment they're exported. Different departments build their own extracts. Filters vary. Definitions drift. Meetings turn into debates about whose numbers are right.

The cost isn't just wasted time – it's delayed decisions on scheduling, purchasing, and customer commitments. Expediting and overtime driven by stale data. Leadership that can't trust the KPIs in front of them.

When data isn't trusted, action slows.

ERP-Connected, Always Current

Stop exporting. Fact-Trak connects directly to your ERP and refreshes automatically. The numbers on screen reflect what's happening now – not what happened when someone last pulled a report.

One Consistent Set of Numbers

Same rules, same definitions, every team. No more conflicting extracts. No more "which spreadsheet is right?" before every meeting.

Self-Service Analysis

Slice, filter, and drill into the data without waiting on IT. Business users explore performance questions on their own – and get answers in minutes instead of days.

From Reconciling Data to Acting on It

The shift is simple: stop spending time assembling the numbers and start spending time on what the numbers are telling you.

Drill-Down to Root Cause

Start at a KPI — on-time delivery, scrap, margin, backlog. Click into the jobs, customers, items, and transactions driving the result. No manual digging. No export-and-filter cycles.

AI-Assisted Analysis

The Fact-Trak AI Assistant surfaces patterns in your performance data and suggests likely drivers — so you spend less time investigating and more time acting.

Trusted KPIs Across the Organization

When accounting, operations, planning, and sales all see the same numbers, meetings shift from "Is this right?" to "What do we do?"

The result: Faster response to operational changes, reduced overtime and expediting, improved KPI credibility, and lower reporting labor burden.

Connect With Our Experts — (920) 406-3030 | lakeco.com | info@lakeco.com

The Lake Companies builds execution tools for manufacturers — helping teams manage documents, streamline processes, and keep operations running smoothly across the shop floor and beyond.
