Move to the Cloud — Without Losing Control of the Floor

Manufacturers planning cloud ERP migrations face a difficult question: what happens to shop-floor execution during the transition?

Bundled shop-floor tools often mean retraining operators, rebuilding workflows, and accepting gaps in labor capture and job visibility during cutover. The floor doesn't stop running while IT migrates.

Shop-Trak eliminates that risk. It runs on-prem or in the cloud, preserves your existing workflows, and keeps real-time execution intact throughout the transition — no retraining, no disruption, no gaps.

Execution Continuity Throughout Migration

Shop-Trak is designed for shop-floor execution—not adapted from warehouse or mobility workflows. That focus is why operators adopt it faster and supervisors trust the data sooner.

Execution Continuity

Keep real-time labor capture, job tracking, and WIP visibility running before, during, and after migration. No parallel systems. No manual stopgaps.

Operator-Trusted Interface

The same interface your operators already know. No retraining shock. No adoption curve. Typical shop-floor implementations complete in a single day.

Purpose-Built for the Floor

Shop-Trak is designed for shop-floor execution — not adapted from warehouse or mobility workflows. That focus is why operators adopt it faster and supervisors trust the data sooner.

Your Migration Roadmap Stays on Track

Cloud migrations stall when teams can't answer "what happens to the floor?" Shop-Trak gives IT and operations a clear answer.

No Capability Trade-Offs

Move to the cloud without downgrading the execution tools your floor depends on. Real-time labor, dispatch priorities, and job progress all carry forward.

Integrated Documentation

Pair Shop-Trak with Doc-Trak and keep drawings, work instructions, and job packets accessible at the operator's station — no ERP logins, no hunting for files.

Lower Total Risk

Avoid the hidden costs of switching execution platforms mid-migration: evaluation cycles, retraining, rework, and productivity dips. Stay on the tool your team already trusts.

The result: faster cloud migration timelines, uninterrupted shop-floor operations, and operator confidence from day one.
